

Aryan Maheshwari

San Francisco, CA · US Citizen · 510-396-7206 · aryanmaheshwari@gmail.com · LinkedIn · GitHub

PROFILE

AI-native Forward Deployed Engineer with 4+ years building production systems across the full stack. Specializes in owning enterprise accounts end-to-end — from discovery calls and scoping to shipping and iterating on agentic systems in live environments. Track record of turning ambiguous customer problems into working automation, fast.

TECHNICAL SKILLS

AI & Agents: Anthropic Claude, OpenAI, LangChain, LangGraph, Agentic workflows, Multi-agent orchestration, Eval set design, Tool-using agents, MCP servers, RAG, Context engineering, Prompt design

Frontend: React, TypeScript, JavaScript (ES6+), HTML5, CSS3, WCAG 2.1 AA, i18n/l10n, Component libraries

Backend: Node.js, Express, GraphQL, REST APIs, Python, Django, PostgreSQL, MongoDB, MySQL

ML & Data: PyTorch, MLflow, Time-series forecasting, Batch inference, Feature engineering

Platforms: AWS, GitHub, CI/CD, JIRA, Agile

Languages: English (fluent), Spanish, Hindi, Urdu, Portuguese

EXPERIENCE

BackOps AI · Forward Deployed Engineer

Feb 2026 – Present · San Francisco, CA

- Owned 3 enterprise accounts simultaneously as sole or primary engineer — managing live deployments, leading discovery calls, and driving iterative agent improvements across all accounts in parallel
- Designed a parent–child agent orchestration architecture using LangChain that fans out a task across specialized child agents, pinpointing the exact point of failure per sub-task and logging each child's success/failure; built eval sets from these traces to systematically track and improve reliability across multi-step agent workflows
- Diagnosed and resolved a legacy agent failure for our longest-running client, reducing unnecessary escalation rate from 39% to 0% through root cause analysis and targeted agent logic improvements
- Identified a recurring manual workflow during a customer discovery call I led, and designed an automated twice-daily agent execution that saved an 8-person ops team 3–4 hours each per day in bulk action processing
- Built analytics dashboards for a major enterprise account — leveraging UI/UX intuition to surface carrier performance rankings, top claim drivers, and actionable business insights that directly informed client strategy
- Built 4 AI agents from scratch and migrated 8 legacy agents to modern architecture; institutionalized debugging learnings into product intelligence, improving reliability across all accounts

Spare CS Inc · Sr. Frontend & Applied AI Engineer · Founding Engineer

Aug 2025 – Feb 2026 · Remote

- Architected a production React component library from zero with WCAG 2.1 AA compliance, ARIA support, and a full i18n/l10n framework — serving as the foundation for all product UI
- Shipped high-performance, accessible, mobile-first interfaces using React and Node.js, streamlining core user flows by restructuring navigation and reducing required click-throughs by 75%, enabling users to complete the same tasks with significantly fewer steps
- Designed and deployed a 24/7 multilingual RAG chatbot using OpenAI APIs, enabling localized, context-aware customer support at scale
- Productionized a PyTorch ML model delivering predictive insights that improved client retention and informed marketing strategy

Veeva Systems · Full-Stack Software Developer

Aug 2022 – Aug 2025 · Pleasanton, CA

- Led development of the Bulk Lock & Freeze feature managing 1M+ subject datasets — core to clinical trial analytics workflows for global enterprise clients
- Spearheaded Backbone.js → React migration, standardizing frontend architecture across teams and unlocking long-term scalability
- Drove global reach by shipping automatic language translation across Spanish, Portuguese, French, and Mandarin markets

IBM · Software Developer Co-op

May 2021 – Dec 2021 · San Jose, CA

EDUCATION

BS Computer Science · San Jose State University *Aug 2019 – Aug 2022*
