Technical Skills

Languages & Scripting	Javascript (ES6+), Typescript, Java, Python, HTML5, CSS3
Frontend	React, Jest, HTML5, CSS3
Backend & APIs	Node.js, Express, GraphQL, REST APIs, Django, Spring
Frameworks & Libraries	ReactJS, NodsJS, ExpressJS, GraphQL, Django, Spring Framework, REST APIs, Jest, JUnit, Swing
Databases	MySQL, MongoDB, CockroachDB, Relational database design
Tools & Platforms	JIRA, GitHub, GitLab, BitBucket, Heroku, AWS, CI/CD, Ansible
Applied Machine Learning	PyTorch, Time-Series Forecasting, Feature Engineering, Model Training & Evaluation Pipelines, Batch Inference, Model Versioning, MLflow Production ML Deployment, Monitoring & Retraining
Generative AI & Agentic Systems	Anthropic Claude, Google Gemini, Context engineering, Prompt design, Agentic workflows, Tool-using agents, MCP servers, RAG, OpenAI (GPT, Codex)
Testing & Automation	Unit/functional testing, test strategy development, CI/CD pipelines
Other Skills	Agile development, Cross-functional collaboration, Cloud Systems, Scalable Architecture, Production Support
World Languages	English (fluent), Hindi, Urdu, Spanish, Portuguese

Work Experience

Senior Frontend & Applied AI Engineer	<i>Spare CS INC -- Remote</i>	Aug 2025 - Present
- Architected and scaled a production-grade front-end platform as the founding Frontend Engineer, building a shared React component library with accessibility-first design (WCAG 2.1 AA, ARIA), responsive UI systems, and a robust i18n/l10n framework to support global, multilingual users. - Led development of high-performance, accessible, and responsive UIs using modern React patterns and Node.js APIs, improving rendering performance, reducing latency, and increasing reliability across devices and browsers. - Partnered cross-functionally with Product, Design, Backend, and Customer teams to deliver inclusive, mobile-first, and scalable experiences, ensuring usability, accessibility compliance, and performance at scale. - Reduced user friction by 75% through UX optimization, cross-platform performance tuning, and AI-assisted development workflows leveraging ChatGPT and Claude. - Designed and deployed 24/7 multilingual customer support via a Retrieval-Augmented Generation (RAG) chatbot using OpenAI APIs, enabling localized, context-aware assistance. - Productionized a PyTorch-based machine learning model delivering predictive insights that improved client retention, informed marketing strategy, and drove measurable growth in bank membership and engagement.		
Full-Stack Software Developer	<i>Veeva Systems – Pleasanton, CA</i>	Aug 2022 – Aug 2025
- Designed, built, tested, and delivered scalable front-end solutions powering clinical trial analytics for global clients, leveraging ReactJS, TypeScript, and REST APIs. - Led development of the Bulk Lock and Freeze feature, managing datasets with 1M+ subjects, delivering reliable, performant UIs integral to core analytics workflows. - Spearheaded migration of critical infrastructure from Backbone.js to React, standardizing front-end development across teams for long-term scalability and maintainability. - Improved engineering standards by increasing unit test coverage from 40% to 90% using Jest, leading to significant improvements in product quality, deployment reliability, improve release velocity, and code health - Developed real-time collaborative interfaces supporting large-scale data uploads (up to 1TB), focusing on system resilience and UI responsiveness. - Collaborated cross-functionally with product management and design teams in iterative Agile cycles, presenting designs, participating in code reviews, and mentoring junior engineers. - Drove global reach through automatic language translation across multiple markets (Spanish, Portuguese, French, Mandarin), enhancing accessibility.		
Software Developer Co-op	<i>IBM – San Jose, CA</i>	May 2021 – Dec 2021
- Automated key operational processes using Ansible and REST APIs to improve scalability and system reliability for internal analytics products. - Modernized deployment pipelines, ensuring consistent environment provisioning for scalable, testable systems. - Expanded skill set in cloud technologies (AI, Cloud Computing), supporting innovative backend systems tied to analytics and reporting platforms.		

Education

BS Computer Science, San Jose State University	San Jose, CA	Aug 2019 - Aug 2022
---	--------------	----------------------------

Studied Java, OOP Concepts, Data Structures, Unit Testing, Artificial Intelligence, Machine Learning, Python, Game Studies, Bioinformatics
